attn: Ms Anita Alenko

Dear Ms Alenko:

316 Bowman Dr.
Woodbury NJ 08096
Oct 21, 2003

Indicated below is my second response to your USPTMO Oct 3, 2003 stamped letter requesting I provide you with a one sentence claim to my patent application Number 10/076/774, "Reducing Tread separation in tires" which also applies for improving continuous synthetic filaments for textile yarns as well.

In my patent application, "I claim substituting laser-pierced in place of drilled holes in the plate of and adding a pulsed sonic generator in the back of a spinneret through which viscous polymer fluids flow produces continuous synthetic filaments with surface irregularities that do not have to be cut and respun into yarns for textiles with increased wool and linen similarities at reduced costs.

I would appreciate your response as to the acceptability of the above one sentence claim for producing more wool and linen like continuous synthetic filament yarns used in textiles at reduced costs.

yours truly
Nicholas M. Masich
